

### AMENDMENTS TO THE CLAIMS

1-13. (Canceled)

14. (Previously Presented) An eyeglass, comprising:

a frame, wherein the frame is configured to support at least one lens in a user's field of view when worn by the user, the frame comprising:

at least one speaker support, wherein the at least one speaker support is coupled to the frame with a coupling; and

a speaker supported by the at least one speaker support,

wherein the speaker support is configured such that the speaker may be pivoted over a predetermined distance with respect to the frame to position the speaker adjacent the user's ear when worn by the user;

at least one audio device supported by the frame;

at least one lens configured to have electronic variable light attenuation supported by the frame and being configured to change its attenuation of visible light in accordance with an electronic control signal;

at least one video unit being supported by the frame, the video unit being in electrical communication with the audio device, the video unit being viewable by the user of the eyeglass with the variable light attenuation of the lens being adjustable to permit a desired amount of visible light to pass through the lens in response to the electronic control signal; and

a power circuit having a power source, the power circuit being supported by the frame and configured to alter the variable light attenuation of the lens and to provide power to the video unit.

15. (Previously Presented) An eyeglass in accordance with Claim 14, wherein the audio device comprises an audio interface for a cellular phone.

16. (Previously Presented) An eyeglass in accordance with Claim 14, wherein the audio device comprises a user operable switch supported by the frame and electronic device controlled by the switch.

17. (Previously Presented) An eyeglass in accordance with Claim 14, wherein the at least one lens comprises a plurality of spaced substrates, a dichroic dye disposed between the

substrates, and wherein the power source comprises a first power source configured to alter an orientation of the dichroic dye.

18. **(Original)** An eyeglass in accordance with Claim 17, wherein the frame comprises at least a first ear stem, the power source being disposed in the ear stem.

19. **(Previously Presented)** An eyeglass in accordance with Claim 18, additionally comprising a second ear stem, at least a portion of the audio device being disposed in the second ear stem.

20. **(Previously Presented)** An eyeglass in accordance with Claim 19, the power source additionally comprising a second power source for powering the audio device disposed in the second ear stem, the first power source being disposed in the first ear stem.

21. **(Previously Presented)** An eyeglass in accordance with Claim 20 additionally comprising a first user operable switch disposed in the first ear stem and configured to control the first power source and the second user operable switch disposed in the second ear stem and configured to control the audio device.

22. **(Previously Presented)** An eyeglass comprising:

an audio device,

at least a first lens, the first lens comprising a video unit and having variable light attenuation, the video unit being in electrical communication with the audio device, the video unit being viewable by a wearer of the eyeglass with the light attenuation of the lens permitting a desired amount of light to pass through the lens toward an eye of the wearer of the eyeglass;

a frame supporting the audio device, the frame including at least a first lens support supporting the first lens, the first lens support being configured to allow the first lens to pivot relative to the frame between at least first and second positions, wherein the lens provides a first magnitude of light attenuation when the first lens is in a first position and less light attenuation when the first lens is pivoted to the second position for providing selectively variable light attenuation for the first lens;

at least one speaker supported by the frame; and

a power circuit being supported by the frame and configured to provide power to the video unit.

23. **(Previously Presented)** The eyeglass according to Claim 22 additionally comprising at least one audio transducer supported by the frame in at least a first position in which the audio transducer directs sound energy toward the ear of a wearer wearing the eyeglass.

24. **(Previously Presented)** The eyeglass according to Claim 23 additionally comprising a boom supporting the audio transducer from the frame, the boom having a forward end supported by the frame and a rearward end connected to the audio transducer.

25. **(Previously Presented)** The eyeglass according to Claim 24, wherein the forward end of the boom is connected to the frame with a connector that is configured to allow the forward end of the boom to translate forwardly and rearwardly relative to the frame.

26. **(Previously Presented)** The eyeglass according to Claim 25, wherein the forward end of the boom is connected to the frame with a connector that is configured to allow the forward end of the boom to pivot relative to the frame about an axis that is generally parallel to a line of sight of a wearer of the eyeglass.

27. **(Previously Presented)** The eyeglass according to Claim 22, wherein the first lens support is configured to allow the first lens to be pivoted about an axis generally perpendicular to vertical when a wearer is wearing the eyeglass.

28. **(Previously Presented)** The eyeglass according to Claim 22 additionally comprising a second polarized lens supported by the frame so as to be stationary relative to and in alignment with the first lens, wherein the first lens is also polarized.

29. **(Previously Presented)** The eyeglass according to Claim 22, wherein the audio device comprises an MP3 audio player.

30. **(Previously Presented)** An eyeglass in accordance with Claim 14, wherein the at least one audio device is positioned within a cavity within the frame.

31. **(Previously Presented)** An eyeglass in accordance with Claim 14, wherein said audio device comprises an MP3 player.

32. **(Previously Presented)** The eyeglass according to Claim 22, wherein the audio device is positioned within a cavity within the frame.

33. **(Canceled)**

34. **(Canceled)**

35. **(Previously Presented)** An eyeglass in accordance with Claim 14, further comprising a printed circuit board supported by the frame, wherein an electrical conduit extends from the speaker through the speaker support and frame to the printed circuit board when the eyeglass is worn by the user.

36. **(Canceled)**

37. **(Previously Presented)** The eyeglass according to Claim 22, further comprising a printed circuit board supported by the frame, wherein an electrical conduit extends from the speaker through the speaker support and frame to the printed circuit board when the eyeglass is worn by a wearer.

38. **(Previously Presented)** An eyeglass, comprising:

- a frame configured to support at least one lens in a user's field of view when worn by the user, the frame having at least a first ear stem and a second ear stem;

- at least one lens supported by the frame, the at least one lens comprising at least one variable light attenuation assembly configured to change its attenuation of visible light in accordance with an electronic control signal;

- at least first and second speakers supported by the frame such that the first speaker can be positioned adjacent to a first ear of the user and the second speaker can be positioned adjacent to a second ear of the user when worn by the user;

- a wireless transceiver supported by the frame, wherein the wireless transceiver is configured to wirelessly receive a first wireless signal from a source and to wirelessly transmit a second wireless signal, wherein the wireless transceiver is configured to output a transceiver output signal based upon the first wireless signal;

- an interface supported by the frame, wherein the interface is configured to receive the transceiver output signal and provide a speaker signal to at least the first speaker;

- a video unit being supported by the frame and being in communication with the wireless transceiver, the video unit being viewable by the user of the eyeglass with the light attenuation of the lens permitting a desired amount of light to pass through the lens toward an eye of the wearer of the eyeglass; and

- a power supply, carried by the frame, wherein the power supply is configured to provide electrical power to the electric light attenuation and the video unit of the eyeglass.

39. **(Previously Presented)** The eyeglass of Claim 38, wherein the wireless transceiver is configured to establish a personal area network with the source.

40. **(Canceled)**

41. **(Previously Presented)** The eyeglass of Claim 38, wherein the source comprises a cellular telephone.

42. **(Previously Presented)** The eyeglass of Claim 38, wherein the source comprises a compressed audio file storage device.

43. **(Previously Presented)** The eyeglass of Claim 38, wherein the electronic control signal is provided to control variable light attenuation of the lens from the interface.

44. **(Previously Presented)** The eyeglass of Claim 38, wherein the first wireless signal represents a caller's voice during a phone call from a cellular phone, and wherein the speaker signal provided by the interface corresponds to the first wireless signal.

45. **(Previously Presented)** The eyeglass of Claim 38, wherein the first wireless signal represents a stereo audio signal received from a digital music source.

46. **(Previously Presented)** The eyeglass of Claim 38, further comprising a microphone supported by the frame and in electrical communication with the interface, wherein the microphone is configured to detect the user's voice when worn by the user and provide a voice signal to the interface, and wherein the second wireless signal corresponds to the voice signal.

47. **(Previously Presented)** The eyeglass of Claim 38, further comprising a memory in electrical communication with the interface, wherein the memory is configured to store digital information provided by the interface.

48. **(Previously Presented)** The eyeglass of Claim 47, wherein the digital information comprises a compressed audio file.

49. **(Previously Presented)** The eyeglass of Claim 47, wherein the digital information corresponds to the first wireless signal received by the wireless transceiver.

50. **(Previously Presented)** The eyeglass of Claim 38, wherein the frame further comprises an internal cavity, and wherein said interface is located within the cavity.

51. **(Previously Presented)** The eyeglass of Claim 14, wherein the audio device comprises a wireless receiver.

52. **(Previously Presented)** The eyeglass of Claim 14, wherein the audio device comprises a wireless transceiver.

53. **(Previously Presented)** The eyeglass of Claim 22, wherein the audio device comprises a wireless receiver.

54. **(Previously Presented)** The eyeglass of Claim 22, wherein the audio device comprises a wireless transceiver.

55. **(Previously Presented)** The eyeglass of Claim 14, wherein the video unit comprises a video display unit.

56. **(Previously Presented)** The eyeglass of Claim 55, wherein the at least one lens comprises the video display unit.

57. **(Previously Presented)** The eyeglass of Claim 14, wherein the video unit comprises a display screen.

58. **(Previously Presented)** The eyeglass of Claim 14, wherein the audio device comprises electronics for driving the video unit.

59. **(Previously Presented)** The eyeglass of Claim 22, wherein the video unit comprises a video display unit.

60. **(Previously Presented)** The eyeglass of Claim 59, wherein the at least one lens comprises the video display unit.

61. **(Previously Presented)** The eyeglass of Claim 22, wherein the video unit comprises a display screen.

62. **(Previously Presented)** The eyeglass of Claim 22, wherein the audio device comprises electronics for driving the video unit.

63. **(Previously Presented)** The eyeglass of Claim 38, wherein the video unit comprises a video display unit.

64. **(Previously Presented)** The eyeglass of Claim 63, wherein the at least one lens comprises the video display unit.

65. **(Previously Presented)** The eyeglass of Claim 38, wherein the video unit comprises a video display screen.

66. **(Previously Presented)** The eyeglass of Claim 38, wherein the audio device comprises electronics for driving the video unit.

**Application No.:** 10/628,847  
**Filing Date:** July 28, 2003

67. **(Previously Presented)** The eyeglass of Claim 38, further comprising a carrier detector being configured to cause said wireless transceiver to enter a sleep mode when the transceiver output signal is not being transmitted thereto.
